

KamaGames Partners with Viber to Bring its Product to the Messaging Service Platform

Dublin, Ireland – September 28th 2016 - KamaGames®, a global developer and publisher of social casino games for mobile platforms, today announced its partnership with one of the leading mobile messaging service platforms.

Starting with today's launch of a specially designed version of its hugely popular 3D Blackjack game, users will now be able to experience the rush of the blackjack table as they sit and play with their friends via the Viber messaging app.

KamaGames Dublin's Managing Director Andrey Kuznetsov commented, "Viber's reach and engaged communities in key markets of interest to KamaGames has made this partnership a natural choice. This is another step in allowing more players to engage with our games and to further boost the KamaGames global footprint as we continue our worldwide expansion".

KamaGames' 3D Blackjack for Viber gives even more players the opportunity to play one of KamaGames most popular market leading social casino gaming titles. This latest iteration takes all of the much loved features, modes and interface from the iOS and Android versions but has been designed exclusively with the Viber platform in mind. As well as being to join and connect to Viber directly from the game, players will also be able to build their player profile using their existing Viber username and photo, import their Viber contacts into their 3D Blackjack friends list and can also message their friends directly from the Blackjack table, even if their friend isn't playing at the time.

Shai Magzimof, Head of Games at Viber said "We are constantly looking for new and unique ways to keep our users engaged. The addition of KamaGames' 3D Blackjack boosts our offering of premium social casino games and we are looking forward to a long and successful partnership with the release of more of KamaGames' titles in the future across the Viber network".
